

Transformer Architecture and the Attention Mechanism

Vedran Mitić 2123

How Artificial Intelligence is
Transforming the World.

1 The Problem with Previous Models

RNN - Recurrent Neural Networks

- Sequential processing (word by word)
- Hidden state bottleneck

LSTM - Long Short-Term Memory

- Forget gate
- Input gate
- Output gate

Abstract

The dominant sequence transduction models are based on complex recurrent or convolutional neural networks that include an encoder and a decoder. The best performing models also connect the encoder and decoder through an attention mechanism. We propose a new simple network architecture, the Transformer, based solely on attention mechanisms, dispensing with recurrence and convolutions entirely. Experiments on two machine translation tasks show these models to be superior in quality while being more parallelizable and requiring significantly less time to train. Our model achieves 28.4 BLEU on the WMT 2014 English-

Recurrent Neural Network

2. Self-Attention

Transformer Architecture

- Parallelization – processing the entire sentence at once
- GPU acceleration
- Equal distance between tokens

3. Transformer Types

Encoder-Decoder (Original)

- Encoder - Input
- Decoder - Output
- Translation and Text Summarization
- BART
- “Understand A, to create B”

Encoder-only

- Understanding Models
- MLM (Masked Language Modeling)
- Text Classification
- BERT
- “Give me the text, and I will tell you what it means”

Decoder-only

- Generativni modeli
- CLM (Casual Language Modeling)
- Text generation, chatbots, coding...
- GPT
- “Based on what you said, I will continue the sequence”

4. Architecture

4.1. Embedding

- Tokenization
- Token Embedding
- Positional Encoding
- Final Embedding

Embedding 🔍

4.2. Transformer block

- Heart of the process
- GPT-3 has 96 blocks
- Multi-head Self Attention
- MLP

4. 2.1 Multi-head Self-Attention block

Step 1. Q, V, K matrices

Step 2. Multi-Head splitting

- $2304/12/3 = 64$

4.2.1 Multi-head Self-Attention block

Step 3. Masked Self Attention

4.2.1 Multi-head Self-Attention block

Step 4. Output and head concatenation

4.2.2 MLP

- Normalization and Residual Connection
- Expansion Layer
- GeLU
- Compression Layer
- Normalization and Residual Connection
- Repeat

4.2.3 Output

- Final Layer Norm
- Logits
- Softmax
- <|endoftext|>
- Max tokens

identical mer Probabilities 🔍

Tokens	Logits	Scaled logits	Top-k	Softmax
a	-110.87	-110.87	-110.87	30.39%
the	-110.93	-110.93	-110.93	28.61%
two	-111.74	-111.74	-111.74	12.70%
how	-111.96	-111.96	-111.96	10.21%
my	-111.99	-111.99	-111.99	9.91%
three	-112.18	-112.18	-112.18	8.19%
10	-112.33	-112.33	$-\infty$	0%
20	-112.37	-112.37	$-\infty$	0%
what	-112.55	-112.55	$-\infty$	0%

5. Post training
